

TIME LAPSE EXPERIMENT 01

Posted on 2017-01-15 by spd_wp_admin

Dear Reader,

This past Wednesday, I rose bright and early intending to take a photograph at dawn. Instead of a single photo, I ended up with the following very short experiment in time lapse photography. As in so many things the process was not as simple as the headline. But once I had gone through the process (some number of hours), it was not too daunting either.

Software Used

-> Lightroom CC

-> LRTimelapse 4.7.4 is a brilliant Lightroom add-on available at <https://lrtimelapse.com/>.

Cheers, spd

I think this is the timelapse you referred to in your email. Very nice! I've been thinking of trying time lapse sunrises, but haven't got around to it yet. I note it's still dark out right now. Hmmmm.
